

Visualizing Expert Network via User-Interface Markup Language and ActionScript

Santipong Thaiprayoon

Human Language Technology (HLT) Laboratory

National Electronic and Computer Technology Center (NECTEC)

Outline

- ◆ Introduction
- ◆ Background and Related Technology
- ◆ System Framework Design
- ◆ Case Study
- ◆ Conclusions & Future Works
- ◆ Questions & Answers

Introduction

- ◆ Thailand has a large number of experts in various domains working in many different public and private organizations.
- ◆ Searching for experts in a specific domain of knowledge is difficult.
- ◆ The concepts and techniques of social networking and information visualization are adopted.
- ◆ Social network is the construction of social relationships in terms of nodes and links.

Introduction (Contd.)

- ◆ The proposed framework is based on the User-Interface Markup Language (MXML) and ActionScript.
- ◆ We designed a framework for visualizing online expert network and applied visualization techniques.

Background and Related Technology

- ◆ Flex SDK: is a free open source framework for building and maintaining expressive web applications.
- ◆ ActionScript: is the object-oriented programming (OOP) language based on ECMAScript.
- ◆ MXML: is an XML-based user interface markup language.
- ◆ Flare: is an ActionScript library for creating interactive visualizations for the Web that runs into the Adobe Flash player.

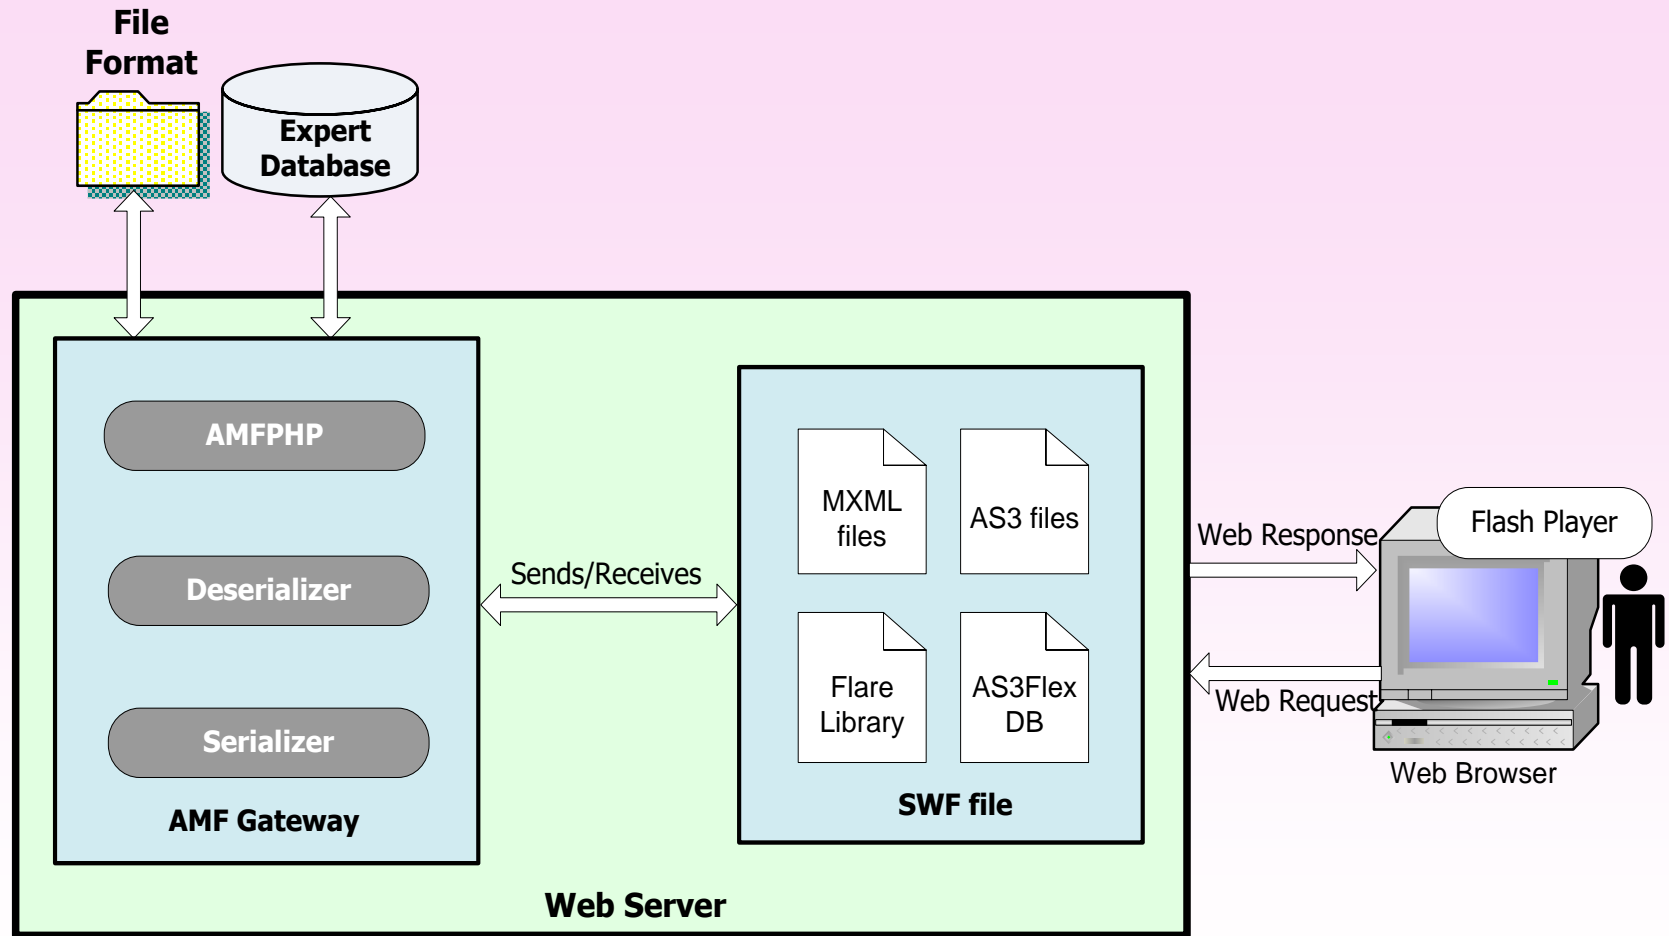

Who benefits from our work?

- ◆ R&D managers can use the system to search for a group of experts in each research area.
- ◆ Funding agency can use such system to allocate project funding more effectively by not giving the funding to any overlapping research projects.
- ◆ Anyone can search for expert who can help answer some particular questions.

Why Flare and ActionScript?

- ◆ Flare visualization toolkit is an open-source framework.
- ◆ Flare enables people to build and customize a wide variety of interactive visualizations.
- ◆ Flare is also designed to make it easy for programmers to create new visual representations.
- ◆ Flare toolkit is to provide rich visualizations that can embed seamlessly into the web with minimal pain on the part of users.
- ◆ The release of ActionScript 3 further sealed the deal, enabling better performance and improved programming models.

TI Concordance of antibiotic resistance and ERIC-PCR DNA fingerprint
pattern in Escherichia coli isolated from farmer and broiler in the
same farm

SO WORLD JOURNAL OF MICROBIOLOGY & BIOTECHNOLOGY

DT Article

DE antibiotics; broiler; Escherichia coli; farmer; resistance

ID POULTRY SLAUGHTERERS; ENTEROCOCCI; PROVINCE; ANIMALS; HUMANS; PIGS

AB The study was conducted to quantify the concordance of antibiotic
resistance and ERIC-PCR DNA fingerprint pattern in Escherichia coli (E.
coli) isolated from farmers and their broilers of 95 broiler farms in
Songkhla province, Thailand. Four hundred and fifty-seven and 460 E.
coli isolates from both groups produced 35 patterns of antibiotics
resistance. Mono-resistance to doxycycline (23.2%) in isolates from
farmers and multiple resistance to doxycycline, nalidixic acid,
norfloxacin and ciprofloxacin (17.8%) were the most common finding in
broilers. Twenty-seven farms had 44 within-farm concordant patterns of
resistance. From simulation, the frequency of concordance was
significantly higher than concordance by chance alone ($P < 0.05$). Out
of these 44 matched sets, only four had the same DNA fingerprint
pattern. Concordance by DNA pattern was also not associated with
phenotypic resistance. Clonal spread is therefore not a good
explanation of the concordance in this population. Other mechanisms
need further analysis.

A Case Study: Constructing a Thailand's Researcher Network From Database (Contd.)

- ◆ We consider two types of relationships:
 - ◆ Direct (social): The direct relationship is defined as the co-authoring degree between one researcher to others.
 - ◆ Indirect (topical): The indirect relationship is defined when two researchers have publications under the same research topics represented by controlled keywords.
- ◆ We store the relationship scores, keywords and profiles in a MySQL database.
- ◆ We design the database structure consisting of four tables.

Conclusions

- ◆ We propose a framework for visualizing expert network from expert database.
 - ◆ AMF Gateway
 - ◆ Visualizing expert network on the web
- ◆ The system developed by using ActionScript, MXML and Flare library.
- ◆ We apply Force-Directed layout technique developed in our framework.
- ◆ The system support more efficient and effective expertise information searching and browsing.

Future Works

- ◆ In the future, we additionally other visualization features such as photo, tool tip, panning and zooming.
- ◆ We are interested in applying other visualization techniques to more complex system framework.
